EDUCATION

University of Toronto

Honours Bachelor of Science, Computer Science (GPA: 3.5/4.0)

Toronto, ON

September 2021 – June 2026

EXPERIENCE

SAP Software Developer

Aecon Group Inc

Etobicoke, On

October 2023 – Present

- Designed and developed Java and Python automation solutions that powered production data pipelines for SAP user provisioning, role assignments, and account maintenance, reducing time to complete by 75% while improving operational reliability.
- Partnered with 20+ end users across operations to gather and engineered 5 new automation features that cut manual SAP administration workload by an estimated 12 hours per week.
- Managed access lifecycle (provisioning, de-provisioning, role assignment) for 2,000+ users across 3-5 backend systems, handling 50+ requests/day via API automation software that was developed as one of my projects with minute-level turnaround and 100% compliance.
- Established a centralized logging and monitoring framework for script execution, API activity, and system events on Unix, reducing troubleshooting and debugging time 30–40% across multiple automation pipelines.

PROJECTS

MEDAI | TypeScript, React, Node.js, Express.js, MongoDB, Cypress, Docker

January 2025 – April 2025

- Led a team of 5 in an Agile development environment to build an AI-powered healthcare platform enabling doctors and patients to securely share medical information, schedule appointments, and interact through a full-stack web application built with TypeScript, React.js, Express.js, and MongoDB.
- Produced a RAG pipeline with OpenAI APIs by chunking physician notes, generating embeddings, and using vector search to ground pre-appointment summaries in patient-specific context, cutting token usage by 30% and improving accuracy.
- Created an automated LLM evaluation framework, prompting the model to generate outputs and scoring them against golden tests for accuracy and identifying strengths/weaknesses, driving iterative prompt refinement to reach a 90% accuracy target.
- Planned and implemented backend APIs secured the server with HTTPS certificates and used the latest authentication libraries, enabling structured data exchange between frontend and backend.
- Coordinated task tracking and issue resolution across the team using JIRA and GitHub Issues, applying Git and Docker to support collaborative development and reproducible environments increasing productivity by 50%.
- Maintained CI/CD pipelines using GitHub Actions to automate build, test, and deployment stages in a Git-based workflow, cutting manual deployment steps by 5 hours per week and reducing deployment-related production incidents.
- Constructed a new test suite made up of 50+ files in order to cover our systems with unit, integration, and UI tests.

CERTIFICATIONS

Anthropic Education

Building with the Claude API

July 2026

AWS Training and Certification

AWS Certified Cloud Practitioner

May 2024

SKILLS

Programming Languages: Java, Python, C/C++, C#, SQL (Postgres), JavaScript, TypeScript, HTML/CSS
Frameworks & Technologies: SpringBoot, React, Node.js, Express.js, REST APIs, JUnit, SAP, Android SDK
Developer Tools: Git, Docker, GitHub Actions, Cypress, Postman, VS Code, Jupyter, Android Studio, JIRA
Data Engineering: ETL/ELT, Data Modeling, Data Transformation, SQL (PostgreSQL), MongoDB
Cloud & Operating Systems: Unix/Linux, AWS
AI: OpenAI API, Anthropic Claude API, RAG, AI Agents, Prompt Engineering, Embeddings, Vector Search
Libraries: pandas, NumPy, Matplotlib, PyTorch
